

One tap to diversified onchain exposure

A Seeker-first Devnet payment prototype with a clear C3 target methodology.

C MARKET /
DEVNET

A working mobile proof

MWA wallet connection
5 USDC Devnet payment
C3 methodology on device

Crypto diversification remains fragmented and confusing

Users face a methodology question, a wallet approval, and a proof question in separate places.

01

The idea

Allocation language is hard to understand on a phone.

02

The action

Wallet approval often feels detached from the product story.

03

The proof

A user needs a clear record of what happened on-chain.

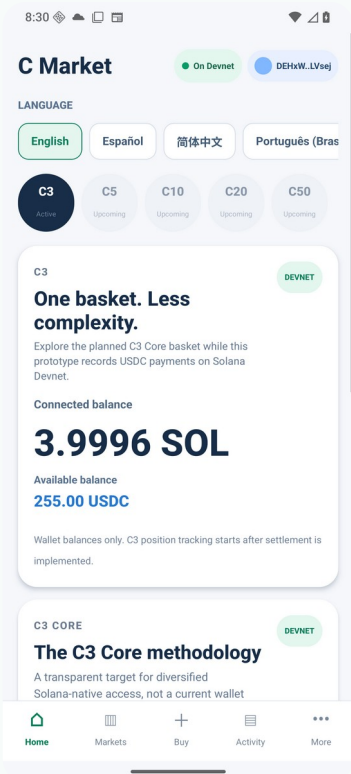

C Market

One mobile
context

Target
Wallet
Receipt

A mobile-first C3 buying experience

C Market places the target methodology, wallet boundary, and Devnet proof in one Seeker flow.

C3 Core target methodology

Bitcoin 40% / Ethereum 30% / Solana 30%

- 01

Understand

See the target and its limits.
- 02

Connect

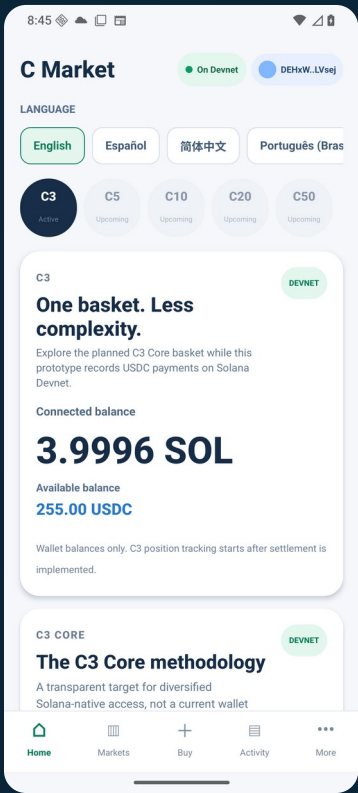

Use Phantom through MWA.
- 03

Verify

Read a public Devnet receipt.

Seeker, Phantom MWA, multilingual interface

The app is designed around the moment a user connects a wallet on a physical Android device.

Seeker-first

Signed Android APK tested with Metro stopped.

Wallet-aware

Phantom opens through Mobile Wallet Adapter.

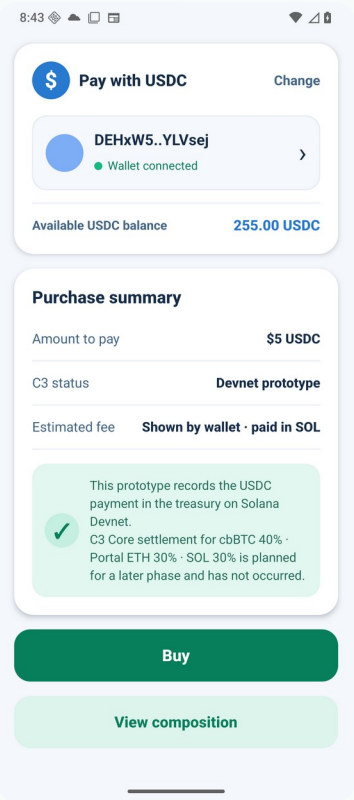

English-first

English, Spanish, Simplified Chinese, and Brazilian Portuguese.

User keys stay in the wallet. C Market never asks for a seed phrase.

Signed APK and finalized 5 USDC Devnet transaction

A public RPC record proves the payment path. It does not prove basket settlement.

FINALIZED

5 USDC

Solana Devnet / SPL Token transferChecked

Verified by read-only Devnet RPC. The current release records the payment; C3 asset settlement remains planned.

BTC 40%, ETH 30%, SOL 30% as target methodology

The percentages explain the planned basket. They do not describe current holdings.

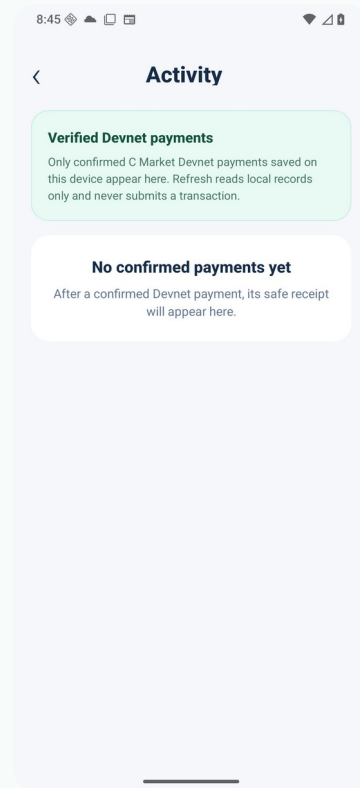

Current release: no BTC, ETH, or SOL settlement has occurred.

Activity, receipts, clarity, and future recurring purchases

The current release makes the next mobile session easier to understand. Future recurring purchases remain roadmap work.

Activity

A dedicated place for confirmed Devnet receipts saved locally.

Clarity

The app keeps target weights separate from wallet balances.

Next step

Reviewed settlement and user-authorized rebalancing come later.

Roadmap and closing

A working Seeker release with a reviewed path forward

NOW

Seeker APK, MWA, Devnet payment proof

NEXT

Security-reviewed non-custodial settlement

LATER

Separate Mainnet release decision
